Eder Negrete

Experience

Frontend Engineer - Rappi - Mid 2019 -

Rappi is a delivery company that's mainly focused on bringing anything to you as fast as possible. Today is present in 9 countries and more than 200 cities. I'm currently working in the e-commerce area.

- Created a news feed where the user can sync instagram and facebook and associate posts to products, this was a big feature for our users who saw a 30~40% increase in the sales through the app.
  - Created and implemented the architecture of the app using Angular 10
  - I work very close with the product team to define the next features and user needs
  - Defined code style-guide for the project
- Constantly improving the performance of the e-commerce site

Frontend Engineer - RunaHR - Mid 2019 - Mid 2020

Runa is a human resources software solution designed for small to medium sized companies. It offers a cloud-based software solution to change the way they pay payroll and human resources management.

- Created and implemented the architecture for the new Frontend apps with Lerna (monorepo)

- Created and implemented the migration plan to migrate the current SPA to the monorepo, (SaSS to Emotion.sh, Create React App to Next.js)
- Led a documentation project that involved creating a platform where we could document React components, integrated the UI Kit created by the UX team inside the platform, with the help of Zeplin Hooks.
- Integrated deployment in the monorepo with Heroku and Releaseapp.io
- Helped to create the code standards inside the company (components, code structure, i18n) ● Created career plans for developers and helped them to achieve the goals and KPIs ● Integrated WebSockets in the platform

Frontend Engineer - Grin Scooters / Grow Mobility - Early 2019 - Mid 2019

Grin (Mexico) merged with Yellow (Brazil), both micro-mobility companies, and I was involved on the integration team that helped the stack / company merge. I was working on the Grow Pay team, it's a wallet (webview) inside the Yellow and Grin app where you can send, receive money, pay services and more.
- Migration of the stack, and Architecture from Mustache with jQuery to Next.js ● Integrated Latino American payment providers (Conketa, MercadoPago, Adyen, Paypal) ●

Integration of Unit, e2e testing and continuous integration tools
● In charge of the performance KPIs and to maintain the best practices to achieve them ●
Direct communication with the UX team to build the best experience possible for the user

Lead Frontend Developer - Rocket.la - mid 2018 - late 2018

Rocket is a Startup based in Mexico City that helps people to improve their financial status.
● Migrated the Frontend Architecture from Django to Vue
● In charge of the Pixel installation, maintenance and features
● Add features that impact the product hand by hand with the UX team
● Use tools to improve the app. (Segment, Google Data Studio, Autopilot)
● Built a bot (Express.js) to read real-time updates on a database and send data to Google
   Analytics

Sr Frontend Developer - Sngular - late 2017 - mid 2018

I did remote work for Madrid, Spain. I worked on an IoT app that reads traffic and cars data to make
statistics and make traffic predictions.
● Build the dashboard to display the data (Angular 4)
● Made integration with Google Maps Api
● Build a Design System Platform
● Improved performance of the app

Sr Frontend Developer - Compropago - mid 2017 - late 2017

Compropago is a small-sized company that facilitates people to make online payments. I worked with
them to help build the Frontend architecture of the sites in Vue.js.
● Refactored the architecture to work with web-components
● Made the analysis and implementation of the required services (Node.js, Express.js)

Frontend Developer Team Leader - Bbva Bancomer (Via Sngular) - 2016 - 2017

I worked as a contractor at BBVA Bancomer, we created the new online banking experience. I
contracted with them to build a strong team of Frontend Developers, build the new architecture of the
app and migrate the current one to a new Framework developed by Bbva (based on Polymer).
● Developed and implemented the architecture of the new online banking experience ●
Worked hand by hand with the UX team
● Developed web-components and established good practices to develop them ●
Worked with Cells.js a Polymer based framework developed by BBVA
● Built the development environment on Express.js (User Auth, 16~ services, connection to PSQL,
   ES6)
● Team management

Extra stuff

- I like to write a lot, you can check some of my posts in [Medium](#)
- I love to give talks, in Mexico City I have given some talks about my experience in Javascript. Some slides are available at my [slideshare](#)
- I have imparted workshops in Mexico City, mainly about Vue.js, React.js and Polymer.

Keywords

React.js	Vue.js
Redux	Vuex
Vanilla Javascript	Node.js

Express.js	Koa.js
Sketch / Zeplin / Adobe xd usage	CSS / SaSS / Stylus / Less / BEM
SQL / PSQL / MySql	ECMAScript 6 +
PWA w/ React and Vue	SSR Next/Nuxt
Angular	Typescript
